1. All sources for heights in EB are A.G.S. Map.; Libr. Corres. is source for new figure.
2. All sources for heights in EB are A.G.S. Map, with exception of Pan de Azuar and Nevada de Chita for which there is no source or the figures may be a contributor's. New figures from correspondence.
3. All sources for heights in EB are It. Atlas with exception of Aletschhorn (International Map) and Matterhorn (EB MAP). New figures are from correspondence.
4. No source noted for figures in EB pertaining to Israel mountains; figures may be a contributor's, the exception here being Tell "Aur (Army Air Force, World Aeronautical Charts.) New figures from correspondence.
5. Listed and cross referenced in Sr., listed only as Tabor in all other sources. Not certain that the two names refer to the same mountain.
6. All sources for EB figures A.A.F. with exception of Mikano which has no source listed or may be a contributor's figures. New figures from correspondence.
7. Spelling in all sources Karissimbi.
8. Other source A.A.F.-W.A.C.
9. With respect to the name used, in Israel for example, sources list the names as above, the Anglicized name is used. However, the Hebrew (Israeli) name will be different, usually starting with Jebel, the Hebrew word for mountain. Using this as an example, what decision can be reached concerning the cross referencing of names and the entry of these names in articles? This will then apply to all countries where there is a difference in the spelling of names and in the actual preferred name of a peak.
